

QS/1®'s Web Refill Services

Make your refill process more convenient and less time consuming for your customers.

QS/1 has a variety of options to offer your customers more convenient ways to submit refill requests. Our mobileRx® app allows your customers to request refills from their smartphones. Pharmacies looking to establish an Internet presence can utilize CornerDrugstore.com® to create a professionally-developed, customer-friendly website. Pharmacies with an existing website can utilize QS/1's Express Prescription Refills service.

Mobile Smartphone App for Patient Convenience

With QS/1's mobileRx app you can offer your patients the ability to refill multiple prescriptions using their smartphones. Patients can simply enter the prescription number, scan the barcode on the bottle or view their Patient Profile and select which prescription to refill. It also provides a scheduler so patients can set reminders to take their medications. The app includes information about your pharmacy, such as address, phone number and hours of operation, and is integrated with QS/1's Pharmacy Management Systems for a more efficient workflow.

Create a Website with Online Refills

CornerDrugstore.com simplifies creating a website for your pharmacy. It provides a turn-key website design and services without the need for a web developer or IT resources. You can offer your patients quick and easy online refills. It is fully integrated with our pharmacy management software for a fast and accurate refill process.

Easily Add Online Refills to Your Website

If you have a website, QS/1 offers solutions that provide patients the convenience of entering online refill requests through your website. Our online refill services communicate directly with QS/1's pharmacy management software to eliminate data entry, simplify the filling process and improve efficiency. Our Express Prescription Refills service provides a link on your website to a web page for online refills without the need for web developers or programmers. It validates prescriptions in real time and includes the delivery method, date and time prescriptions will be ready for pickup. For pharmacies with programming capabilities, we offer complete integration of online refill services with your current website through a basic API.

- Provide simple, easy-to-use online refill ordering for customers
- Support multi-prescription customer orders
- Offer patients the ability to refill prescriptions using their smartphones with mobileRx app
- Take advantage of a turn-key website for your pharmacy
- Communicate online refills directly with your pharmacy management system
