

Interfaces

Enhance operational efficiency with interfaces to many time and money-saving technologies. QS/1® follows government and industry standards, such as HL7 and NCPDP, when creating interfaces to meet specific needs.

Billing

Send patient and transaction information in real time or batch mode to your billing system to increase accuracy and reduce redundant data entry.

Demographics

This interface allows QS/1 Systems and non-QS/1 systems to exchange admission, discharge and transfer data in real time or batch mode.

Dispensing

Send data to dispensing, counting or robotic systems as prescriptions are filled in your QS/1 System.

Document Management

Interface with your document management system to store, organize and retrieve healthcare documentation.

eMAR

eMAR eliminates paper records, automatically storing and documenting the administration of electronic orders. QS/1 interfaces with several eMAR vendors and offers three different interfaces:

- ADT automatically adds, updates or discharges patients.
- e-Prescribe transmits prescriptions electronically in NCPDP script or HL7 to your QS/1 System.
- HL7 and Medication Orders are sent by your QS/1 System to your eMAR vendor when a prescription is filled or profiled.

e-Prescribe

Offer the safety of e-Prescribe through an NCPDP SCRIPT-based interface with SureScripts-HubRx, Emdeon™ and RxNT™.

Electronic Orders

Send or receive electronic orders in real time with HL7 interfaces.

Employee Payroll Deduction

This interface matches employee medical record numbers and updates POS preferred shopper numbers, charge limits and charge permissions. Also send the POS transaction report or export the employee medical record number, transaction date/time, amount and POS transaction number.

Interactive Voice Response

Streamline your IVR setup so customer input can flow directly into your QS/1 System, reducing customer wait time, expanding store hours and freeing pharmacists for patient-centered tasks.

ScriptTalk™ Station

Ideal for the elderly and those who cannot read prescription information, En-Vision America's ScripTalk Station is a talking prescription reader that utilizes RFID and text-to-speech technology to generate talking labels.

Shipping

Send customer demographic information in real time to shipping applications for greater accuracy and less duplicate data entry.
