

Independent Pharmacy

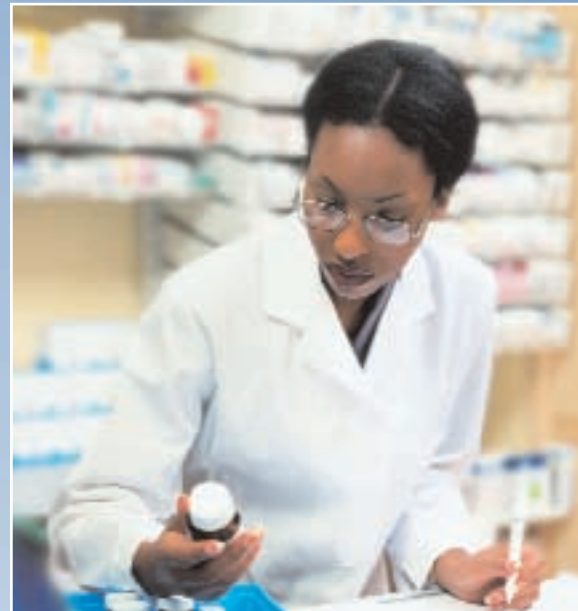

QS/1

Independent Pharmacy Solutions

Today's independent pharmacies face tough challenges – surging demand, elusive profit margins, increased competition from new sources, and all with fewer pharmacists. At QS/1[®], we understand the difficulties faced by pharmacies every day. That's why we created the NRx[®] Pharmacy Management System.

NRx's easy-to-use, graphical user interface makes processing new prescriptions and filling refills quick and easy. The HIPAA-compliant system makes processing claims, reporting, managing inventory and maintaining and updating data easy. Tasks can often be completed in just a few mouse clicks or keystrokes. And training staff is easier with the aid of onscreen context sensitive Help and easy access to a variety of training materials including step-by-step instructional wizards.

Tailor your pharmacy management system to meet your unique needs. Or allow QS/1 to host your computer system with NRx OnDemand[™] and reduce computer maintenance from your pharmacy. QS/1 offers a range of integrated services and systems that can enhance workflow and patient safety in your pharmacy while providing the comprehensive management tools necessary for better profitability.

Increase Productivity and Profitability with Optional QS/I® Products and Services

Tailor your pharmacy management system's capabilities with integrated products and services to enhance your pharmacy's day-to-day operations:

Workflow

Improve patient safety and streamline day-to-day operations with QS/I's integrated workflow module. Implement a quality assurance check station with NDC verification and optional pill images. Create an error resolution area for dealing with prescription filling issues like third party rejections or doctor refill authorizations.

Interactive Voice Response

Improve accuracy and create a less stressful work environment with QS/I's IVR. Maximize efficiency by storing customer messages directly in your QS/I pharmacy system for access from any workstation. With refill requests directly routed to your processing queue, store productivity will benefit from the system's smooth and seamless integration. And your customers will appreciate the convenience of ordering refills from your pharmacy 24 hours a day, 7 days a week.

Interfaces

With existing interfaces to most automated dispensing and packaging systems, e-prescribe, IVR and billing systems, only QS/I can connect you to so many productivity-boosting tools designed to improve daily workflow and keep your pharmacies competitive. Visit www.qs1.com for a complete listing of interfaces.

Wizards

Built-in wizards provide interactive, step-by-step instructions on infrequent tasks like adding new personnel, new price plans, A/R and initial store setup.

Central Profiles

Pharmacies with more than one location can use central profiles to add patients from other stores. The Central Profiles module allows you to copy patient information from your other stores, refill prescriptions between stores easily and central DUR check.

PowerLine™

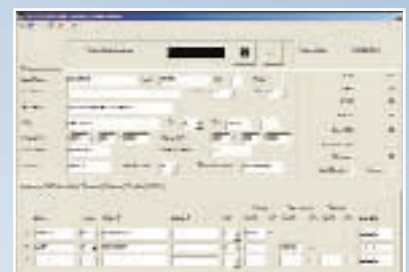

Process claims quickly and easily via The Internet with QS/I's own PowerLine claims switch. Drug costs and records are automatically updated during transmission to reduce lost profitability. The system alerts you to errors, providing the opportunity to correct them before your claims are even submitted. And, our Pre and Post-edit Claim service automatically updates drug price during transmission to maximize pharmacy profit.

Point-of-Sale

Boost your front-end bottom line revenue with QS/I's integrated Point-of-Sale. Use the system to not only better manage pricing, inventory and security but to also improve and add more customer checkout options. Enjoy the benefits of an integrated storewide management system.

SystemOne® for HME

Turn your HME department into a profit center with SystemOne. With tools for better inventory and rental management, the system also simplifies HME claims and billing by alerting you to costly errors before they happen. And in the event of an audit, SystemOne provides complete compliance and documentation for Medicare regulations.

PrimeCare® for Institutional Pharmacy

PrimeCare is the system of choice for institutional pharmacy management. With flexible reporting and comprehensive facility management functions, PrimeCare can help you better serve your local nursing home. Gain comprehensive control of your facility from workflow and order entry to finance and claims management. You can customize reports and choose from a full complement of medical-records forms.

Images and Imprints

Reduce errors with Images and Imprints, the QS/1 service that provides images for nearly 20,000 drugs. Ensure the highest levels of patient safety and help eliminate potential dispensing confusion with drug images displayed on screen as prescriptions are dispensed.

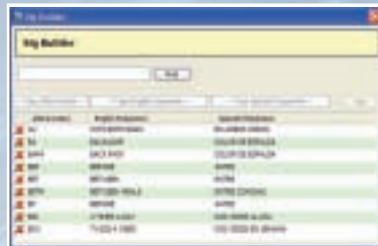

Electronic Signature Capture

Capture third party and HIPAA signatures as well as gather acknowledgement of privacy practices and acceptance or refusal of counseling or safety caps with QS/1's integrated electronic signature capture.

Clinical Updates

Keep your clinical information accurate and current with automatic clinical updates from QS/1. You can receive quarterly updates of critical clinical data including contra-indication codes, generic indicators, NH therapeutic class and units per day. With Internet access you can receive real-time updates. Provide patients with handy, take home patient monographs detailing potential side effects, precautions and dosages. Add French and Spanish language patient monographs to provide non-English speaking patients with up-to-date information on their prescriptions.

Price Updates

With up to 10 percent of drug prices changing every day, you can protect your bottom line with daily or weekly electronic price updates from QS/1. Automatically update data including manufacturers, package sizes, competitive pricing, MAC pricing, net wholesale acquisition and state codes.

WebServices™

Let QS/1 provide you with your own pharmacy website or expand the functionality of your existing website. Easily offer customers the convenience of online refills along with premium consumer and clinical health content.

Mail Order

Save maintenance prescription customers a trip to the pharmacy. Ensure customers don't miss a dose by shipping prescriptions before they run out. For complete record-keeping of higher volume mail order, use our UPS shipping interface to scan the tracking number into the transaction.

Gain Greater IT Control with Enterprise

QS/1's Enterprise solution allows up to 256 store locations to reside on a single server, eliminating the need to maintain multiple servers at different locations. Allow file sharing between stores to eliminate duplicate data entry of patient, drug or doctor information at separate stores. Transmit all claims from the same central location to improve efficiency and reduce communication costs. Protect your stores' data with centralized backups, data maintenance and multiple security levels. All software and server updates only need to be installed on your central office server. Each store can even operate on a different software release thus allowing stores the flexibility to upgrade when they're ready.

NRx OnDemand

Reduce computer maintenance in your pharmacy with NRx OnDemand. Gain all the benefits of the NRx system but leave all computer maintenance, software upgrades, security backups and general server maintenance to QS/1. Plus, all pharmacy data is stored in redundant data centers preventing loss of valuable data due to power outages, network or equipment failures.

Proven Provider

With QS/1, you're gaining more than a full-featured pharmacy management system. We have research and development expertise that reaches back more than 25 years. And we provide service and support from our staff of more than 550 professionals in 25 offices across North America. With QS/1, you'll gain a proven provider and partner for your pharmacy.
