

QDM[®] - QS/1[®] Document Management

Electronically organize, attach and store documentation with NRx[®].

QDM is an organization and storage tool that provides an easy way to manage and attach documents within the NRx Pharmacy Management System. QDM helps manage the ever-increasing number of pharmacy documents. Documents can be entered into the system via fax, file upload, scan or email attachment. All documents are encrypted when stored on the hard drive of the QDM server, adding another layer of security and privacy.

Automate and Customize Faxable Forms

QDM's integration with NRx creates an easier, more efficient way to customize, use and automatically populate information on forms. Easily create or upload forms, such as prescription or patient transfers, refill requests and Prior Authorization requests. Forms can be auto-populated with information from 112 different fields, including patient, facility, prescriber, drug, prescription, ancillary, transaction and clinical records within NRx.

Improve Compliance

Properly managing documents can protect against liability and create a record of services, allowing pharmacies to easily comply with regulations. Documents can be associated or linked with records in NRx, such as drug, insurance, patient, prescriber, prescription or transaction records. Files are stored and may be retrieved by using the Documents icon.

Organize and Route Documents

Create your own queues for organizing documents. Assign specific users to each queue and customize routing rules. Documents can be split into multiple queues if needed. The system can automatically forward documents associated with barcodes, fax IDs and email addresses to the queues you designate. Users can annotate the documents with notes or create generic text stamps.

Improve Efficiency

QDM digitally organizes, routes, retrieves and stores documents, freeing your staff from the tedious shuffle of paperwork.

- Integrates with the NRx Pharmacy Management System
- Receives documents via scan, file upload, cloud fax or standard email attachment
- Reduces costs, filing time and paper-related waste
- Auto-populates custom-made forms
- Easily edit and annotate documents
- Customize queues and routing rules for efficient document processing and storage
- Provides three levels of user security settings: administrator, manager and general
- Aids documentation compliance with HIPAA, Medicare, Medicaid and other regulatory requirements
