

Remote Checkout®

Complete POS capabilities – wirelessly.

QS/1®'s Remote Checkout system adds portability to pharmacy checkout.

Whether it's a hospital bedside, a drive-thru, an aisle inside the pharmacy or as an extra register for peak times, you have full point-of-sale (POS) functionality in a mobile tablet.

Ultimate Portability

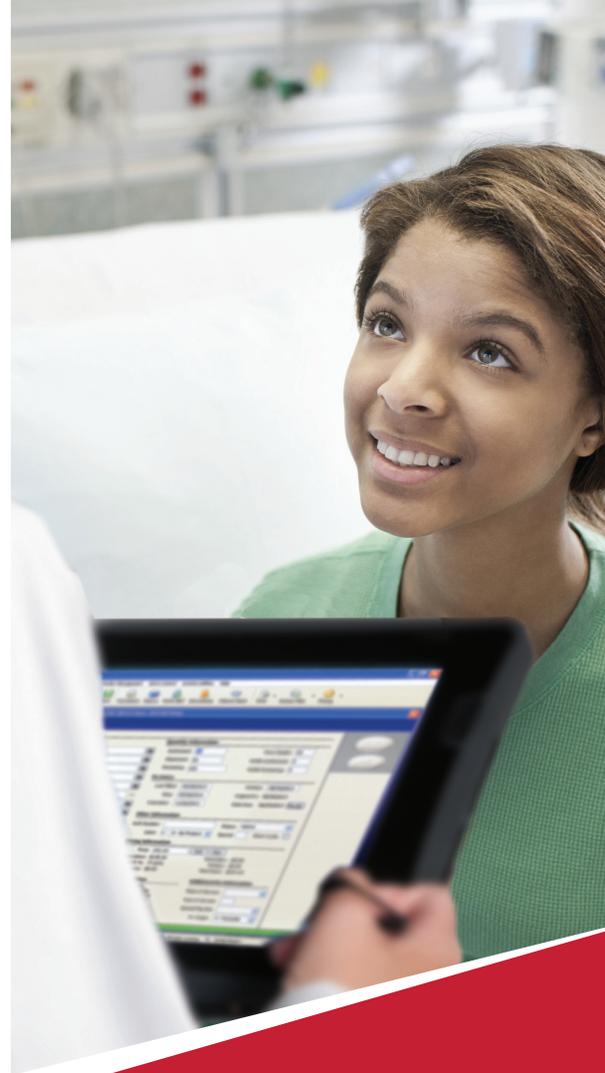

Utilizing a mobile POS tablet with a color touchscreen, a barcode scanner and a magstripe card reader and a device to process EMV chip cards, Remote Checkout allows you to take your point-of-sale anywhere. Add the Bluetooth printer that can clip to a belt, and you can print a receipt at a hospital bedside or any point of delivery.

Full Functionality of Point-of-Sale

Remote Checkout provides complete point-of-sale capabilities utilizing your Wi-Fi service. Scan the prescription label, process credit/debit as well as FSA cards, then capture signatures for PSE and HIPAA as well as credit/debit cards and print a receipt. Within the pharmacy, you can use it at your drive-thru or as an extra register at peak times.

Convenient Bedside Checkout

Perfect for a hospital outpatient pharmacy, Remote Checkout can help improve patient adherence, reduce readmissions and increase pharmacy revenue. It enables you to deliver patients' medication to their rooms as they prepare to go home. There, you can scan the prescription(s), process payment, capture signatures, even provide a receipt before leaving the room.

- Offers an affordable, mobile POS solution
- Enables better customer service during peak periods
