

# Configurations

**QS/1® offers multiple system configurations to allow you to choose the best solution for your business.**

Whether you want to install your data and software on a server at your location or you'd rather not worry about software updates and server issues, QS/1 has a solution for you. All configurations provide the same easy-to-learn and use industry-leading software as well as integration with QS/1's full array of products and services. Each is also backed by QS/1's exceptional service and support from our nationwide network of offices.

## Installed

Installed is for businesses desiring to host and manage their data, software and server at their location. The system server resides at each individual business site or at a remote location and is managed and maintained by that location's personnel.

## Cloud

QS/1's Cloud is the perfect solution for businesses that don't want the added responsibility of software updates and server management. The Cloud-based system is hosted by QS/1 and utilizes redundant servers, networks and hosting centers. QS/1 professionals handle all updates, server monitoring and management, backups, maintenance and anti-virus updates.

## Host-Remote

Manage up to 10 locations from just one server. With this configuration, all your locations run off one central, secure server, greatly simplifying your IT responsibilities. Routine maintenance, such as updates and troubleshooting of software, clinical files, pricing structure, virus protection and backups, is required only on one server. It's a solid, low-maintenance solution that reduces costs and simplifies communication – the perfect solution for businesses with 10 or fewer locations.

## Enterprise

Most large multiple-location operations prefer our Enterprise solution. All locations are served through a central server at your headquarters. Your corporate IT staff handles management and maintenance of the software and server. Updates are only required on the server, and you can transmit claims for all of your locations from your headquarters. Multiple options are available within an Enterprise solution, providing the flexibility to manage each location or group of locations as you desire.

- Choose the system configuration that suits your business best
- Access the same seamless integration across QS/1's comprehensive array of products and services
- Connect to dozens of industry-leading products and services through more than 200 industry standard interfaces
- Accept (or avoid) as much responsibility as you wish for managing and maintaining your software and application server
- Choice of configuration with different payment options
- Enjoy QS/1's nationwide service, support and training
- Recover quickly from ransomware, malware or a natural disaster with optional Remote Backup and Recovery services
- Add our Multi-Site Management (MSM™) data warehouse application for data and information sharing between networked locations.
