

PrimeCare® for LTC Pharmacy

Flexible software allows maximum customization and connectivity.

QS/1's PrimeCare Pharmacy Management System is developed specifically for long-term care pharmacies serving skilled nursing, mental health and assisted living facilities. PrimeCare helps you manage a multitude of activities, including workflow, billing and comprehensive reporting for greater patient safety, productivity and profitability.

Customizable Workflow

PrimeCare's integrated, scalable Workflow allows you to customize and manage work queues per workstation using up to seven phases, from order entry to delivery. You can manage workflow at either the pharmacy or facility level.

Pharmacy at a Glance

Our Pharmacy at a Glance dashboard helps you avoid bottlenecks by clearly displaying queue information for refills, voicemails, error resolutions, quality assurance and more.

WebConnect®

WebConnect provides efficient and secure communications between your pharmacy and your LTC-facility customers so they can access patient medication information and submit refill orders online. This optional, easy-to-use application allows facility staff to use WebConnect anywhere in the facility, including at the patient's bedside.

Versatile Dispensing Options

PrimeCare allows you to handle short-cycle dispensing with options for daily, 7-day, 14-day and custom fill lists. When using unit-dose processing, our fill lists enable you to use a variety of dispensing intervals and systems and allow you to separate filling and billing with different transaction dates. Manage a Therapeutic Interchange program by creating therapeutic plan tables that contain approved drug substitutions for specific therapeutic class drugs. You can assign the tables to the facilities that have approved them.

Interfaces

QS/1 provides a large selection of tools and services to help improve efficiency, reduce duplicate data entry and improve customer service. QS/1's ready-made interfaces use government and industry standards, such as HL7, XML, Web Services and NCPDP SCRIPT 10.6 to ensure reliable, accurate communications.

Billing and Accounts Receivable

QS/1 offers comprehensive financial data management with easy posting, reporting and tracking of private and facility charges with a variety of accounts receivable reports.

- Create dedicated workstations for order entry, Q/A, error resolution and barcode tote checking
- Pharmacy at a Glance displays queue information to alert you to potential bottlenecks
- WebConnect provides authorized LTC-facility staff secure access to their patients' pharmacy records
- WebConnect can be used throughout the facility on a workstation, laptop or mobile device with internet access
- Easily process statements, trial balances and departmental reports with electronic reconciliation
- Create an invoice without printing a statement with A/R invoice feature
- Develop master lists of approved therapeutic interchanges and assign to specific facilities
