

3

ways to add pharmacy

CLINICAL SERVICES

With costs up and doctor availability down, patients are turning to pharmacies for clinical care. That can mean improved patient health and new revenue streams for you. Pharmacist intervention can help lower overall healthcare costs and prevent unnecessary hospitalizations.

QS/1's systems are designed to help organize and manage your clinical service offerings with tools to create and manage eCare plans, administer and report immunizations, provide wellness management services, and more. When you add a partnership with OmniSYS® through our RedSail Advantage™ program, the options just grow.

These are just 3 ways QS/1 software already supports clinical services. Are you taking advantage?

**RedSail**
ADVANTAGE™

1

eCare Plans

Community pharmacists are providing more clinical services and getting paid for them, finding new ways to grow their business. CPESN® member pharmacies come together to improve patient outcomes with optimal medication use, and eCare Plans facilitate this. They let you correspond with other healthcare providers in a common technical language, so you can work together on the patient's behalf.

When patients' outcomes improve, costs decrease, and a big benefit of CPESN participation is the chance to engage with payers for a share of the savings. QS/1 participated in the eCare Plan pilot and built an eCare Plan feature into our NRx® pharmacy management system.

2

Immunizations

Screening patients for recommended immunizations, educating them about what's needed based on their age or disease state, and either referring them for shots or providing them at your pharmacy is an excellent clinical service to provide for your patients. Use your clinical know-how to create better outcomes, particularly for the high risk and chronically ill, by ensuring they are up to date with their immunizations.

Rely on our built-in, turnkey solutions – available in our NRx and SharpRx® pharmacy management systems – to easily create records, bill charges, and send doctor notifications. An interface with our vendor partner Script Management Partners can also automatically submit immunization information to state registries.

3

Wellness Management

Community pharmacy is about more than just dispensing, and a purposeful, daily focus on patient outcomes can be what differentiates your pharmacy. QS/1 stands beside you with tools to improve the health and well-being of your patients as obesity and comorbidities like high blood pressure, cardiovascular disease, and type 2 diabetes continue to rise. Collaborate with primary care practices to provide and bill for lifestyle-related services, such as weight-loss, smoking cessation, and comprehensive medication reviews.
